Highline with R-Line Package shown

# New Golf.

## The future you've been waiting for.

Rarely does a vehicle offer so much in one complete package. With its heritage rooted in over 40 years of motoring excellence, the latest Volkswagen Golf has been enhanced in every way and sets new standards in stylish design and performance. The Golf has optimum levels of comfort, innovation and downright driver appeal.

At the heart of each Golf variant is a powerful and reliable 110kW engine that provides compelling performance, whatever the drive, while BlueMotion technologies offer greater fuel efficiency.

The Golf's striking appearance is every bit a match for its potent drivetrain and assured roadholding abilities. This is a vehicle whose every curve has been carefully considered and which looks set to tackle any challenge laid before it.

Attention to detail is a hallmark both outside and inside, where high-quality materials make every touchpoint, from steering wheel to switchgear, a pleasure to use. Instrument trims and decorative inlays add to the cabin's visual appeal, while ergonomic seats and driver-oriented surrounds add to the sensation that driver and car act as one.

Advanced intuitive technology takes the form of new Gesture Control\*, an interactive feature that allows drivers to navigate through on-screen menus with a simple mid-air swipe of the hand, and impressive Media Control^, which gives passengers the ability to select music and more via their smartphone or tablet.

With its evolutionary new styling, impressive level of driver safety equipment as standard, and class-leading levels of performance and comfort, the Golf once again sets the benchmark high.

## Exterior

The Golf's shape is recognised the world over for its sleek, precise lines and understated confidence. This latest Golf marks the next step in the evolution of the model, whose reputation is founded on perfect proportions, clean lines and unmistakably European styling. When viewed in profile, the eye is immediately drawn to the Golf's long wheelbase and distinctive horizontal lines that connect the front wheel arch with the rear of the car. The long bonnet and roof, sharply angled rear windscreen and wide C-pillars are all signature Golf features, as is the black radiator grille with chrome inserts.

LED daytime driving lights and LED tail lights are now standard features across the range (LED headlights are available in the Highline variant) and add to the Golf's considerable on-road presence.

The rear offers a resolutely modern interpretation of a design classic. The tailgate features an integrated rear spoiler, while a black rear diffuser below the bumper adds a further point of interest on a car that looks effortlessly cool from every angle.

Setting this latest Golf apart from its forebears is a wider selection of eye-catching alloy wheels, including new 16" Hita alloys, 17" Karlskoga alloys and 18" Sebring alloys on the 110TSI, Highline and Highline R-Line variants respectively.

For drivers wanting to make the ultimate statement, the optional R-Line package (Highline variant only) is a must-have. Potent styling additions set the Golf R-Line apart from every other car on the road and offers a bold declaration of the vehicle's sporty underpinnings.

## Interior

The Golf's interior presents a balanced combination of comfort, style and ergonomics. Volkswagen's commitment to driver enjoyment is readily apparent in the Golf's dashboard, which is every bit as impressive as it is functional, while the choice of Black or Pure Grey Vienna leather appointed upholstery<sup>#</sup> in Highline variants offers owners even more opportunity to personalise their vehicle.

The first hint of the new technology contained in the Golf is the striking 12.3" high-definition Active Info Display\*, which forms part of the optional Infotainment Package in Comfortline and Highline variants.

Also included is Volkswagen's new-generation Discover 9.2" infotainment system complete with smartphone glass appearance. New Gesture Control\* allows the driver to navigate through various menus with a simple mid-air swipe of the hand, while passengers can use the Golf's new Media Control<sup>^</sup> technology to select music and more via their smartphone or tablet. And every journey is an adventure with the Dynaudio Excite 400w premium audio system, which produces a crystal clear aural soundscape.

The Golf Comfortline and Highline also both feature Air Care dual-zone climate control air conditioning with air cleaning function and allergen filter to help keep the cabin air clean and the temperature exactly to your specification.

The driving experience can be further personalised with the choice of Volkswagen's optional Driver Assistance Package (Trendline variant and above), which not only offers drivers a suite of aids to make their journey more enjoyable, but allows them to customise the vehicle's settings exactly to their taste.

And because this is a Golf, you're assured of outstanding luggage space. The Golf hatch holds a generous 380 litres, while the Golf Wagon offers an impressive 605 litres with the seats up and 1620 litres with the back seats down.

# Technology and Safety

Class-leading technology helps make the Golf an efficient and satisfying drive. But it also offers peace of mind by making the vehicle exceedingly safe.

Drivers can take comfort knowing that an assortment of advanced safety technology is there for them when they need it most. Among the aids now standard across the entire range is Front Assist with City Emergency Brake (City EB)<sup>^</sup>, which uses a radar sensor to detect when the distance to the vehicle in front is critical and helps to avoid or mitigate a potential impact.

Other optional safety features include Lane Assist<sup>^</sup>, a lane departure warning system designed to reduce the likelihood of the vehicle straying from its intended course, and Volkswagen's Proactive Occupant Protection System. This clever feature detects when an emergency manoeuvre is being made and prepares the vehicle and its occupant restraint systems in advance of a possible collision. Both are included in the Driver Assistance Package.

Safety is paramount, but in-cabin technology goes a long way to making every trip a pleasurable one. Rear View Camera<sup>^</sup> makes parking a breeze, while the intuitive 8-inch infotainment system with App-Connect<sup>#</sup> puts a world of information and entertainment at your fingertips. Volkswagen's class-leading technology is no more evident than in its Active Info Display (part of the Infotainment package), a ground breaking addition to the Golf that will forever change how driver and car interact.

# Optional Packages Available

Few vehicles can claim to offer as extensive a range of driver comforts as the Golf, even in standard trim. But adding an optional package takes the Golf to the next level.

The Driver Assistance package significantly enhances the driving experience with its suite of advanced features designed to improve safety and assist with day-to-day driving. You'll be more relaxed and comfortable on long journeys with Adaptive Cruise Control (ACC)<sup>^</sup> technology, which keeps the Golf an optimal distance from the vehicle in front. Park Assist<sup>^</sup> uses sensors front and rear to identify spaces and guide drivers into and out of them semi autonomously, while Blind Spot Monitor with Rear Traffic Alert<sup>^</sup> not only detects vehicles in blind spots to the left and right but can detect oncoming traffic when reversing into tricky traffic.

The ability to personalise the driving experience is another unique feature of the package. Simply set your preferred driver seat configuration (Highline variant only), air conditioning, radio station and more and the Golf will respond to your settings every time you take the wheel.

The Infotainment Package (Comfortline variant and above) puts a state-of-the-art infotainment system at your fingertips in the form of a high-res Active Info Display\* instrument cluster and a 9.2" satellite navigation display offering Gesture Control\* and Voice Control\*. You can also enjoy music as it was meant to be heard courtesy of an exquisite Dynaudio Excite 400w premium audio system.

Select the optional R-Line package and the Golf receives a thorough sports styling transformation inside and out, complete with R-Line body styling, exclusive R-Line badging, 18-inch Sebring alloy wheels, progressive steering, sports suspension and tinted rear and rear side windows.

**03** Gesture Control\*

## Colours & Upholstery

The Golf's broad colour palette complements the stylish interior trim, making configuration a simple pleasure. Customise the bodywork of your Golf by choosing from a range of paint finishes including alluring metallic options such as the new Turmeric Yellow Metallic.

Every journey is more relaxing in supportive seats with quality Black Cloth as standard, while high-grade Black or Pure Grey Vienna leather appointed upholstery<sup>#</sup> is a luxurious addition to the 110TSI Highline and 110TDI Highline variants.

\*Please note figures are sourced from overseas data where equipment levels by model variant may vary.

\*The Start/Stop system is designed to reduce fuel consumption. It achieves this by conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

\*\*Fuel consumption figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

# Glossary

## Adaptive Cruise Control (ACC)\*

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Golf approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Golf then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with a DSG transmission. ACC can be reactivated automatically by depressing the accelerator pedal. In vehicles fitted with a manual transmission, the system is automatically deactivated at speeds below 30 km/h and the driver is prompted to take charge by visual and acoustic signals.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driver profile selector also available as part of the driver assistance package.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

## Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

## Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

## Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

## Blind Spot Monitor with Rear Traffic Alert\*

The Blind Spot Monitor with Rear Traffic Alert system supports the driver in assessing and avoiding dangerous situations, especially in critical situations, e.g. city and heavy traffic. The Blind Spot Monitor detects cars and motorcycles in the driver's blind spot and highlights these vehicles via a LED indicator in the door mirror. Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing by displaying a warning in the Optical Parking System (OPS).

Blind Spot Monitor with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

## Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

## Direct Shift Gearbox (DSG)\*

DSG is a manual gearbox in which the gearshifts are controlled electronically. What makes the DSG unique is that it has 2 separate gear sets operated by 2 clutches. The benefit of 2 gear sets and 2 clutches is that one gear set and clutch is engaged driving the vehicle with the second disengaged clutch having already pre-selected the next gear awaiting for power to be transferred. As the next gear has already been pre-selected prior to power being applied, the gear change only takes 3-4 100ths of a second. There is virtually no interruption to power, traction or acceleration. The DSG also offers Tiptronic gear selection and sports mode.

## Driving Profile Selection\*

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal and steering while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by including coasting function (with DSG) and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

\*Optional equipment for specific models.

# Glossary

## Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

## Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

## Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

## Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

## Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

## Front Assist with City Emergency Brake (City EB) function

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Front Assist with City Emergency Brake (City EB) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

\*Optional equipment for specific models.

# Glossary

## Lane Assist\*

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

## Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

## Park Assist\*

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

## Proactive occupant protection system\*

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation, the occupants and the vehicle are prepared for a possible accident. Automatic tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

\*Optional equipment for specific models.
